

Torsemide To Lasix

Oral Torsemide Daily Dose (mg) (Demadex)	Equivalent Oral Furosemide Daily Dose (mg) (Lasix)	Clinical Notes on Dosing Frequency
5 mg	20 mg	Lower dose often used for mild edema.
10 mg (Common Starting/Maintenance Dose)	40 mg	This is the most widely accepted and utilized equivalence (the 1:4 ratio).
20 mg (Common Maintenance Dose)	80 mg	Used for more significant fluid overload, often dosed as 40 mg twice daily (BID).
40 mg (High Maintenance Dose)	160 mg	Used in patients with significant heart failure or renal impairment. Furosemide is generally dosed twice daily at this level.
100 mg	400 mg	Used for diuretic resistance or severe chronic kidney disease, requiring specialized monitoring.
