

Torsemide To Lasix Conversion Chart

Torsemide Daily Oral Dose (mg)	Approximate Furosemide Daily Oral Dose (mg)	Common Dosing Regimen for Equivalent Dose	Equivalent Furosemide IV Dose (mg)	Clinical Scenario & Notes
5 mg	10 - 20 mg	Torsemide 5 mg daily Furosemide 20 mg daily	10 - 20 mg IV	Very mild edema; initial dose in elderly or renally impaired patients.
10 mg	20 - 40 mg	Torsemide 10 mg daily Furosemide 20-40 mg daily	20 - 40 mg IV	Standard starting dose for hypertension or mild CHF.
20 mg	40 mg	Torsemide 20 mg daily Furosemide 40 mg daily	40 mg IV	The most common conversion anchor point. Standard CHF/edema dose.
30 mg	60 - 80 mg	Torsemide 30 mg daily Furosemide 40 mg BID (80 mg total)	60 - 80 mg IV	Used when stepping up from standard dose. BID Furosemide may be started.
40 mg	80 - 100 mg	Torsemide 40 mg daily Furosemide 40-50 mg BID (80-100 mg total)	80 - 100 mg IV	Moderate fluid overload. Often split into BID dosing for Furosemide.
50 mg	100 - 120 mg	Torsemide 50 mg daily Furosemide 50-60 mg BID (100-120 mg total)	100 - 120 mg IV	Significant fluid overload.
75 mg	150 - 160 mg	Torsemide 75 mg daily Furosemide 80 mg BID (160 mg total)	150 - 160 mg IV	Used in patients with partial resistance.
100 mg	200 mg	Torsemide 100 mg daily Furosemide 100 mg BID (200 mg total)	200 mg IV	Severe CHF or renal impairment.
150 mg	300 mg	Torsemide 150 mg daily Furosemide 150 mg BID (300 mg total)	300 mg IV	High-dose therapy for refractory edema.
200 mg	400 mg	Torsemide 200 mg daily Furosemide 200 mg BID (400 mg total)	400 mg IV	Maximum single oral dose. For severe, refractory cases.
